An oak savanna is a type of savanna, or lightly forested
grassland, where oaks (*Quercus* spp.) are the dominant trees.
Although there are pockets of oak savanna almost anywhere in
North On rich soils bur oak (*Quercus macrocarpa*) was the major
tree in Midwestern North "Upper Midwest forest-savanna
transition".

Botanist Tom Rosburg provides diagnostic color photographs of
leaves, acorns and other fruits, and bark along with
descriptions of leaves, fruits, and measurements of blades.
Plant response to fire: Mature bur oak trees are rarely killed
or even top-killed by one or more fires [530]. Bythe area
was dominated by a dense year-old subcanopy of bur oak and
northern pin oak.

Theyalsousedthebarktofyefishingnetstomakethemlessvisibleunderwater
Thick bark: Many sources indicate that bur oak trees produce
very thick, fire-resistant bark [5576,]. The understory in
the Arboretum was dominated by dense honeysuckle and common
buckthorn. However, on good sites it is often crowded out by
species that grow faster and taller.
